

Computer Implementation in R

- R is a system for statistical computation and graphics.
- R consists of
 - a language and
 - a run-time environment with graphics, a debugger, and access to certain system functions.
- R can run programs stored in script files.
- R is freely available from
 - <http://www.r-project.org/>
- R is being developed for Unix and Windows
- R has many specific purpose modules ("add-on packages"). Our implementation uses add-on packages [graph](#) and [ggm](#)
